

Notes:
 Sections marked in blue (areas 1,3 and 10) are subject to two cuts only to allow wildflower growth:
 One cut to be undertaken Feb/March
 The second cut to be undertaken Sept/Oct
 Areas subject to this regime should have arisings along these strips removed in order to keep nutrient levels low.

Area 3: See sketch map below.

Area 1: One metre strip on eastern aspect of verge (field side) to be cut only twice a year in order to allow wildflowers to grow. Rest of verge subject to standard cuts.

Area 10: Allow one metre strip on all aspects of field edge to soften the habitats, whilst following standard cuts on rest of field.
